Task - 1

Aim

A company stores error logs in .txt files on the server. You need to create a tool for developers to view these logs via a browser. Write an Express JS app that reads a text file and shows its content on a web page. Include error handling if the file is missing or inaccessible. This helps developers debug without accessing the server files directly.

Code

Output

Error Log Viewer

```
Testing Error-1
Testing Error-2
Testing Error-3
Testing Error-4
Testing Error-5
```
